# ROWERTRON 

## SERIES 4 DOUBLE THROW SWITCHES

Series 4 switches provide economical, reliable, and safe transfer of low-voltage loads between main power and an auxiliary source.

Heavy-duty double-throw switches come standard in a NEMA Type 4/12 powder-coated steel wall-mount enclosure; $4 \mathrm{X}(316)$ stainless steel enclosures are also available.

The compact mechanism is completely enclosed, and the rotary operator handle is mounted on the door and lockable in three positions: On Line, Off, and On Auxiliary.

Available for single-phase and three-phase power. All 2 -pole and 3 -pole models have a solid neutral bar, and 4 -pole models have a switched neutral on the fourth pole.

Lugs are factory installed for connection to switch poles.

Factory-installed auxiliary contacts for remote ON/OFF signaling or electrical interlocking.

Caution: Do not switch between sources with motor loads operating.

MANUAL, 600 VAC RATED, NOT-FUSED, WITH CENTER-OFF POSITION
The switches listed below are rated $100 \%$ capacity, continuous duty.

| Part Number | Current | Poles | UL98 Listed | SUSE Rated | Approx. Weight (lbs) |
| :---: | :---: | :---: | :---: | :---: | :---: |

## SERVICE EQUIPMENT BONDING

When the switch is used as Service Equipment, the Bonding Jumper must be installed connecting the Neutral Assembly to the Panel. Reference Article 230 of NFPA $70^{\circledR}$ / National Electrical Code ${ }^{\circledR}$ for information on Service Installations. Per 230-91, when the Service Overcurrent Device is not an integral part of the Service Disconnecting Means, it "shall be located immediately adjacent thereto". Reference Article 250 for information on grounding and bonding.

For 100-200 Amp units, use the included bonding braid and \#10-32 ground screws. Torque: 30in-lbs.
For 400 Amp units, use the included copper bus bar and 1/4-20 serrated nuts. Torque: 75in-lbs.
For 600-800 Amp units, use the included copper bus bar and 3/8-16 serrate nuts.
Torque: 240in-lbs.
